

Great Basin  
Coordination Center

## Evening Brief

Date/Time Stamp: Thursday, July 23, 2015 - 8:13 PM

### Weather Summary

Dry, southwest flow will spread across the southern half of the region today while moisture and instability remain to the north for showers and thunderstorms over Idaho, western Wyoming and northeast Nevada for the day. On Friday the dry air will move into western Idaho and cause thunderstorms to become more limited to eastern Idaho and western Wyoming.

Saturday and Sunday will be generally dry and sunny regionwide before a quick trough passes through the northern Rockies bringing cooler temperatures and isolated thunderstorms to the central Idaho mountains. Dry air will remain in place across Nevada and Utah with minimum relative humidities dropping into the low teens to single digits.

A ridge of high pressure looks to finally build over the Great Basin by mid week for increasing temperatures and low relative humidity

### Preparedness Levels

#### Current:

Great Basin	2
National	2

### Great Basin Fire Activity:

New Fires and Acres: 10 / 3.4

### Current Incident Details

#### Todays Activity (from WFDSS):

Incident Name	Unique Fire Identifier	Size	Status	Latitude	Longitude	Pt. Of Origin Sage Grouse Habitat
Willard Peak Road	2015-UTUWF-000424	0.1	Out 07/23/15	41.4446	111.9426	No

fires occurred overnight

## Great Basin Coordination Center

### **Large Fire Summary:**

Ft Sage NV-CCD-030468 293 acres Acreage decreased due to better mapping.  
Final 209 submitted.

---

### **Resources:**

Resources remain adequate and well above GBCC drawdown.

---

### **Great Basin Fire Potential Summary**

Large fire potential will remain low for a few days in the wake of recent precipitation events across the area, but as drier air spreads into the region the potential for new large fires will be on the increase.

By mid-week next week most areas will be experience moderate large fire potential.

For more detail, see [Great Basin 7-Day Fire Potential Outlook](#)
